SUMMARY

I'm a Software Developer that worked on different projects and technologies during his professional career, making also contact with lots of different IT Businesses and Software house Teams, so I managed to use to work with other people from the beginning. Apart from technical skills, I've always tried to put myself as the person and the human being that I am in the project, trying to develop the best way possible internal and external Team relationships and never taking any kind of thing for granted by empathizing, understanding and living everyone different reality within the team. I'll give all myself to improve and grow my professional figure and my personal also, giving all I've got to reach the milestones and objectives that the Company in which I will eventually be included sets itself. In the free time, I like to play the piano, also singing some songs sometimes, reading classics, travel (when it's possible) and I also like to invest in the stock market (and studying its behaviour).

SKILLS

Vue.js	Angular (2)	CI/CD
.NET Core	REST API	MongoDB
Microsoft SQL Server	Git	
Agile (SCRUM)	Agile (KANBAN)	
Jira	AWS	Docker	PHP
Laravel	MySql	MySql
Python (Basics)	RabbitMQ	
Postman	Typescript
